

**ST** SUPERTEC<sup>®</sup> *Since 1954*

**The Finest  
Solution**  
CENTERLESS GRINDER

Established in 1954, **SUPERTEC** manufactures a wide variety of centerless grinding machines with precision and quality to meet the needs of a diverse range of applications. These machines offer solutions to satisfy small lots with a variety of parts or a production environment. An optional automatic loading and unloading system for infeed or thrufeed can be custom built, allowing the machine to run unattended, at a high rate of production while maintaining tight tolerances.

All models feature a Meehanite base casting with Turcite coated double V slideways. Also featured is the hydrostatic Babbitt type spindle bearing, a hydraulic dresser on both wheels, and a pressurized, filtered, recirculating oil system with a heat exchanger for long lasting operation and greater precision.

A Mitsubishi PLC control with a menu-driven LCD touch screen that is easy to learn and easy to program is standard on all automatic infeed (CII) models. Operators need only fill in the blanks and press cycle start to complete an automatic infeed grinding cycle. An optional hydraulic overhead dressing unit with an automatic compensation system helps increase grinding efficiency, thus reducing cycle times.

## BLADE SELECTION

Due to different working diameters, the guide plate and regulating wheel must be parallel as this influences the grinding accuracy significantly.

## BLADE SELECTION TABLE

### STC -12 w / STANDARD WORKREST

| dia. of workpiece(A) | Thickness(T) | Height(H) |
|----------------------|--------------|-----------|
| ø1 - ø2              | 0.8          | 55        |
| ø2 - ø3              | 1.5          | 52        |
| ø4 - ø6              | 3.5          | 51        |
| ø6 - ø9              | 5.5          | 50        |
| ø10 - ø20            | 8.0          | 49        |
| ø21 - ø35            | 8.0          | 45        |

### STC -12 w / SPECIAL WORKREST

|           |     |    |
|-----------|-----|----|
| ø36 - ø50 | 8.0 | 42 |
| ø51 - ø80 | 8.0 | 39 |

### STC -18/20 w / STANDARD WORKREST

|           |       |    |
|-----------|-------|----|
| ø1 - ø2   | 0.8   | 66 |
| ø2 - ø3   | 1.5   | 67 |
| ø4 - ø6   | 3.5   | 65 |
| ø6 - ø9   | 5.5   | 63 |
| ø10 - ø20 | 8.0   | 61 |
| ø21 - ø35 | 12.96 | 78 |
| ø36 - ø50 | 12.96 | 75 |
| ø51 - ø80 | 12.96 | 70 |

### STC -18/20 w / SPECIAL WORKREST

|             |       |    |
|-------------|-------|----|
| ø81 - ø120  | 12.96 | 65 |
| ø120 - ø150 | 12.96 | 60 |

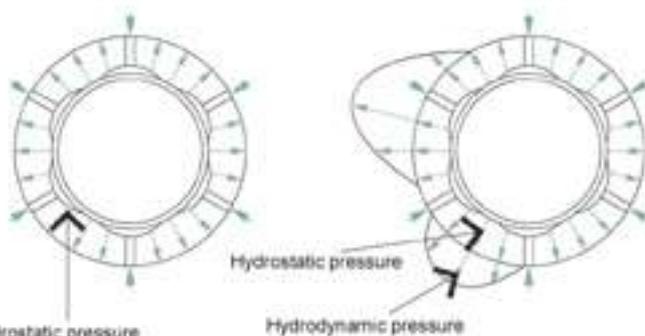

### HYDRAULIC DRESSING UNIT

A hydraulic dresser is equipped on both grinding & regulating wheels. Various types of form dressing can be achieved with optional template.

### WHEEL SPINDLE

The hydrostatic Babbitt type spindle bearing with a 3 point support design and pressurized, filtered, recirculating oil system, eliminates metal-to-metal contact, thus providing a heavy duty grinding capability as well as high vibration dampening performance. A pressure switch interlock prevents spindle start-up until oil pressure is established. This pressure switch interlock also stops the spindle if the oil pressure fails, thus providing a longer spindle life.

#### SPINDLE AT REST

static pressure holds the wheel spindle firmly at the metal bearing center position

#### ROTATING SPINDLE

Static and dynamic pressure combine to provide high rigidity and high double way performance.

### MACHINE STRUCTURE

The machine base is made of Meehanite casting, which is normalized and stress relieved, providing maximum rigidity to assure machine stability and vibration free operation.

## HYDRAULIC SYSTEM

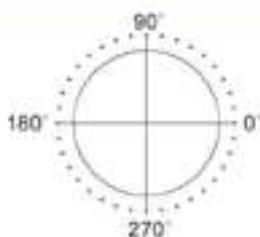

The hydraulic & lubrication system is air cooled to maintain constant oil temperature, and is also separated from the machine to eliminate vibration and dissipate heat.
